

Transcript of LBC recording of Exec discussion 23 Nov 2021 to adopt Master Plan 19mppa

(recording available at <https://youtu.be/XiFrbiSBQDU>)

04:47

Cllr Aslam Khan (Chair)

Do we accept and adopt the master plan?

04:58 Cllr Shaw

(unintelligible) the master plan, the simple reason is, one of the things that's been missing from the airport in a big way, is the environmental impact, also what's happening with climate change and everything else now.

In this draft of the master plan in Section 6, (you know?) they've agreed now we'll will look at paying extra money for noise insulation and the people what are affected, we'll speed up the insulation projects, that we would look at putting more monitoring around the airport and the routes to the airport.

That we look at giving different values to the planes what land, with the low energy planes and the planes what give less emissions out, so that for the first time ever we've got a real climate change and environmental arc in this master plan, so that alone I think, is well worth us saying we should be accepting the officer's recommendations.

06:04 Cllr Javid Hussain

No I think we should adopt it, I think it's needed and it's important and it will take in certain (unintelligible) environment and all that so I think we should adopt it, and let the due process carry on.

06:22 Cllr Roche

Yes, I also agree with adoption of the policy, the master plan. Tom just gave good reasons there for the adoption in relation going forward, in relation to what the policies of this councils are going forward, in climate change etcetera, and it's looking at considerations of that but also we also have to consider the planning development going forward, how it's linked to the local plan, and to sort of, um, ensure that's considered, master plan is considered in any future planning development of the airport.

06:56

Cllr Aslam Khan (Chair)

Unanimous agreement? The proposal is adopted.
